

Individual means of protection

WARNS-1 – miniature passive wideband portable radar

The WARNS-1 is miniature passive wideband receiver. Its main application is the detection of battlefield radars, operating in pulse modes, in frequency range 8 to 18 GHz. The detector is suitable for use in field operations in all weather conditions. The compact, battery operated device is designed to be attached to a soldier's field uniform for "hands off" operation. The presence of a microwave signal is signaled by the illumination of the LED diode and audio alarm is activated also. The instrument can be also powered from an external DC source. Main features are high sensitivity, high reliability, simplicity of use, lightweight, small size, and low power consumption.

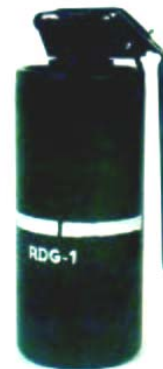

Rucksacks with camouflage effect

are intended for:

- storage and carrying of selected material for realization of combat mission and as a container at a bale of a soldier from aircraft,
- fast discard and shooting in lying position,
- camouflage in visible and near infrared region of an electromagnetic spectrum.

Hand Smoke Grenade

Hand Smoke Grenade RDG-1 is intended for soldier protection against reconnaissance means including laser rangefinders operating in visible and infrared region of an electromagnetic radiation.
